Class	Size Available	Pipes	Fittings	End Joint Connection
SCH - 40	0.5" to 4" (15mm to 100mm)	ASTM D 1785	-	Solvent Cement Joint
SCH - 80	0.5" to 4" (15mm to 100mm)	ASTM D 1785	ASTM D 2467	Solvent Cement Joint

Installation Procedure

1. Cut Pipe: Cut Pipe Square. As joints are sealed at the base of the fitting socket. An angled cut may result in joint failure. Acceptable tools include miter saw, mechanical cut o saw or wheel cutter. Wheel type cutters must employ a blade designed for plastics.

2. Remove Burr & Bevel: Remove all burr from inside and outside of pipe with a knife-edge, file or deburring tool. Chamfer (bevel) the end of the pipe 10°-15° Remove surface dirt, grease or moisture with a clean dry cloth.

3. Dry Fit: With light pressure, pipe should go one third to one half of the way into the fitting socket Pipes and Fittings that are too tight or too loose should not be used.

4. Applicator: Use an applicator that is one half the pipe diameter. Too large an applicator will force excessive cement into the inside of small diameter fittings. Too small an applicator will not apply sufficient cement to large diameter systems.

5. Solvent Cement: Apply a full even layer of cement to the outside of a pipe and medium layer of cement to the inside of a fitting.

6. Set & Cure: Assemble pipe and fitting socket till it contacts socket bottom. Give pipe a quarter turn. Hold pipe and fitting together until the pipe does not back out.

System should be installed in a good and workman like manner consistent with normal industry standards and in conformance with all local plumbing, fire and building code requirements. Failure to follow proper installation practices, procedures or techniques can result in system failure, property damage or personal injury.

Pipes and fittings should be used for their intended purpose as defined by local plumbing and building codes and the applicable ASTM standards.
